INTRODUCTION

The entire IKDC form, which includes a demographic form, current health assessment form, subjective knee evaluation form, knee history form, surgical documentation form, and knee examination form, may be used as separate forms. The knee history form and surgical documentation form are provided for convenience. All researchers are required to complete the subjective knee evaluation and knee examination form. Instructions for scoring the subjective knee evaluation form and the knee examination form are provided on the back of the forms.

The following is a list of common health problems. Please indicate “Yes” or “No” in the first column, and then skip to the next item. If you do have the problem, please indicate in the second column if you receive medications or some other type of treatment for the problem. In the last column, indicate if the problem limits any of your activities.

1. Do you smoke cigarettes?
   - ☐ Yes
   - ☐ No, I quit in the last six months.
   - ☐ No, I quit more than six months ago.
   - ☐ No, I have never smoked.

2. Your height _______ ☐ centimeters ☐ inches

3. Your weight _______ ☐ kilograms ☐ pounds

4. Your race (indicate all that apply)
   - ☐ White
   - ☐ Black or African-American
   - ☐ Hispanic
   - ☐ Asian or Pacific Islander
   - ☐ Native American Indian
   - ☐ Other

5. How much school have you completed?
   - ☐ Less than high school
   - ☐ Graduated from high school
   - ☐ Some college
   - ☐ Graduated from college
   - ☐ Postgraduate school or degree

6. Activity level
   - ☐ Are you a high competitive sports person?
   - ☐ Are you well-trained and frequently sporting?
   - ☐ Sporting sometimes
   - ☐ Non-sporting
IKDC CURRENT HEALTH ASSESSMENT FORM

Your Full Name ______________________________________________________

Your Date of Birth  _________/___________/___________
Day  Month  Year

Today’s Date  _____________/___________/___________
Day  Month  Year

1. In general, would you say your health is:  □ Excellent   □ Very Good   □ Good   □ Fair   □ Poor

2. Compared to one year ago, how would you rate your health in general now?
   □ Much better now than 1 year ago   □ Somewhat better now than 1 year ago   □ About the same as 1 year ago
   □ Somewhat worse now than 1 year ago   □ Much worse now than 1 year ago

3. The following items are about activities you might do during a typical day. Does your health now limit you in these activities? If so, how much?

   a. Vigorous activities, such as running, lifting heavy objects, participating in strenuous sports
      □ Yes, Limited A Lot   □ Yes, Limited A Little   □ No, Not Limited At All

   b. Moderate activities, such as moving a table, pushing a vacuum cleaner, bowling, or playing golf
      □ Yes, Limited A Lot   □ Yes, Limited A Little   □ No, Not Limited At All

   c. Lifting or carrying groceries
      □ Yes, Limited A Lot   □ Yes, Limited A Little   □ No, Not Limited At All

   d. Climbing several flights of stairs
      □ Yes, Limited A Lot   □ Yes, Limited A Little   □ No, Not Limited At All

   e. Climbing one flight of stairs
      □ Yes, Limited A Lot   □ Yes, Limited A Little   □ No, Not Limited At All

   f. Bending, kneeling or stooping
      □ Yes, Limited A Lot   □ Yes, Limited A Little   □ No, Not Limited At All

   g. Walking more than a mile
      □ Yes, Limited A Lot   □ Yes, Limited A Little   □ No, Not Limited At All

   h. Walking several blocks
      □ Yes, Limited A Lot   □ Yes, Limited A Little   □ No, Not Limited At All

   i. Walking one block
      □ Yes, Limited A Lot   □ Yes, Limited A Little   □ No, Not Limited At All

   j. Bathing or dressing yourself
      □ Yes, Limited A Lot   □ Yes, Limited A Little   □ No, Not Limited At All

4. During the past 4 weeks, have you had any of the following problems with your work or other regular daily activities as a result of your physical health?
   YES  NO

   a. Cut down on the amount of time you spent on work or other activities
      □  □

   b. Accomplished less than you would like
      □  □

   c. Were limited in the kind of work or other activities
      □  □

   d. Had difficulty performing the work or other activities (for example, it took extra effort)
      □  □

5. During the past 4 weeks, have you had any of the following problems with your work or other regular daily activities as a result of any emotional problems (such as feeling depressed or anxious)?
   YES  NO

   a. Cut down on the amount of time you spent on work or other activities
      □  □

   b. Accomplished less than you would like
      □  □

   c. Didn’t do work or other activities as carefully as usual
      □  □
6. During the past 4 weeks, to what extent has your physical health or emotional problems interfered with your normal social activities with family, friends, neighbors, or groups?

- Not At All
- Slightly
- Moderately
- Quite a Bit
- Extremely

7. How much bodily pain have you had during the past 4 weeks?

- None
- Very Mild
- Mild
- Moderate
- Severe
- Very Severe

8. During the past 4 weeks, how much did pain interfere with your normal work (including both work outside the home and housework)?

- Not at All
- A Little Bit
- Moderately
- Quite a Bit
- Extremely

9. These questions are about how you feel and how things have been with you during the past 4 weeks. For each question, please give the one answer that comes closest to the way you have been feeling.

How much of the time during the past 4 weeks...

<table>

2000 IKDC SUBJECTIVE KNEE EVALUATION FORM

Your Full Name______________________________________________________

Today's Date: ______/_______/______ Date of Injury: ______/________/_____

SYMPTOMS*: *

1. What is the highest level of activity that you can perform without significant knee pain?
   - 4 Very strenuous activities like jumping or pivoting as in basketball or soccer
   - 3 Strenuous activities like heavy physical work, skiing or tennis
   - 2 Moderate activities like moderate physical work, running or jogging
   - 1 Light activities like walking, housework or yard work
   - 0 Unable to perform any of the above activities due to knee pain

2. During the past 4 weeks, or since your injury, how often have you had pain?

   Never: | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | Constant

3. If you have pain, how severe is it?

   No pain: | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | Worst pain imaginable

4. During the past 4 weeks, or since your injury, how stiff or swollen was your knee?

   - 4 Not at all
   - 3 Mildly
   - 2 Moderately
   - 1 Very
   - 0 Extremely

5. What is the highest level of activity you can perform without significant swelling in your knee?

   - 4 Very strenuous activities like jumping or pivoting as in basketball or soccer
   - 3 Strenuous activities like heavy physical work, skiing or tennis
   - 2 Moderate activities like moderate physical work, running or jogging
   - 1 Light activities like walking, housework, or yard work
   - 0 Unable to perform any of the above activities due to knee swelling

6. During the past 4 weeks, or since your injury, did your knee lock or catch?

   - 0 Yes
   - 1 No

7. What is the highest level of activity you can perform without significant giving way in your knee?

   - 4 Very strenuous activities like jumping or pivoting as in basketball or soccer
   - 3 Strenuous activities like heavy physical work, skiing or tennis
   - 2 Moderate activities like moderate physical work, running or jogging
   - 1 Light activities like walking, housework or yard work
   - 0 Unable to perform any of the above activities due to giving way of the knee
SPORTS ACTIVITIES:

8. What is the highest level of activity you can participate in on a regular basis?
   - Very strenuous activities like jumping or pivoting as in basketball or soccer
   - Strenuous activities like heavy physical work, skiing or tennis
   - Moderate activities like moderate physical work, running or jogging
   - Light activities like walking, housework or yard work
   - Unable to perform any of the above activities due to knee

9. How does your knee affect your ability to:

<table>
<thead>
<tr>
<th></th>

Scoring Instructions for the 2000 IKDC Subjective Knee Evaluation Form

Several methods of scoring the IKDC Subjective Knee Evaluation Form were investigated. The results indicated that summing the scores for each item performed as well as more sophisticated scoring methods.

The responses to each item are scored using an ordinal method such that a score of 0 is given to responses that represent the lowest level of function or highest level of symptoms. For example, item 1, which is related to the highest level of activity without significant pain is scored by assigning a score of 0 to the response “Unable to perform any of the above activities due to knee pain” and a score of 4 to the response “Very strenuous activities like jumping or pivoting as in basketball or soccer”. For item 2, which is related to the frequency of pain over the past 4 weeks, the responses are reverse-scored such that “Constant” is assigned a score of 0 and “Never” is assigned a score of 10. Similarly, for item 3, the responses are reversed-scored such that “Worst pain imaginable” is assigned a score of 0 and “No pain” is assigned a score of 10. Note: previous versions of the form had a minimum item score of 1 (for example, ranging from 1 to 11). In the most recent version, all items now have a minimum score of 0 (for example, 0 to 10). To score these prior versions, you would need to transform each item to the scaling for the current version.

The IKDC Subjective Knee Evaluation Form is scored by summing the scores for the individual items and then transforming the score to a scale that ranges from 0 to 100. Note: The response to item 10a “Function Prior to Knee Injury” is not included in the overall score. To score the current form of the IKDC, simply add the score for each item (the small number by each item checked) and divide by the maximum possible score which is 87:

\[
\text{IKDC Score} = \left( \frac{\text{Sum of Items}}{\text{Maximum Possible Score}} \right) \times 100
\]

Thus, for the current version, if the sum of scores for the 18 items is 45 and the patient responded to all the items, the IKDC Score would be calculated as follows:

\[
\text{IKDC Score} = \left[ \frac{45}{87} \right] \times 100
\]

IKDC Score = 51.7

The transformed score is interpreted as a measure of function such that higher scores represent higher levels of function and lower levels of symptoms. A score of 100 is interpreted to mean no limitation with activities of daily living or sports activities and the absence of symptoms.

The IKDC Subjective Knee Form score can be calculated when there are responses to at least 90% of the items (i.e. when responses have been provided for at least 16 items). In the original scoring instructions for the IKDC Subjective Knee Form, missing values are replaced by the average score of the items that have been answered. However, this method could slightly over- or under-estimate the score depending on the maximum value of the missing item(s) (2, 5 or 11 points). Therefore, in the revised scoring procedure for the current version of a form with up to two missing values, the IKDC Subjective Knee Form Score is calculated as (sum of the completed items) / (maximum possible sum of the completed items) * 100. This method of scoring the IKDC Subjective Knee Form is more accurate than the original scoring method.

A scoring spreadsheet is also available at: www.sportsmed.org/research/index.asp This spreadsheet uses the current form scores and the revised scoring method for calculating scores with missing values.
2000 IKDC KNEE HISTORY FORM

Patient Name ___________________________________________ Birthdate _______/_____/______

Date of Injury ________/______/______ Date of Initial Exam ________/______/______ Today's Date ________/______/______

Involved Knee:  ❑ Right       ❑ Left

Contralateral:  ❑ Normal      ❑ Nearly Normal  ❑ Abnormal      ❑ Severely abnormal

Onset of Symptoms: (date) ________/______/______

Chief Complaint:__________________________________________________________________________

Activity at Injury:  ❑ ADL       ❑ Sports       ❑ Traffic      ❑ Work

Mechanism of Injury:

### Notes:

---

**ICRS Grade 0 - Normal**  
Superficial lesions, Soft indentation (A) and/or superficial fissures and cracks (B)

**ICRS Grade 1 - Nearly Normal**  
Lesions extending down to <50% of cartilage depth

**ICRS Grade 2 - Abnormal**  
Cartilage defects extending down to <50% of cartilage depth (A) as well as down to calcified layer (B) and down to Blisters are included in this Grade (D)

**ICRS Grade 3 - Severely Abnormal**  
Osteochondral injuries, lesions extending just through the subchondral boneplate (A) or deeper defects down into trabecular bone (B). Defects that have been drilled are regarded as osteochondral defects and classified as ICRS-C.
MENISCUS STATUS:

Procedure:
- ☐ medial meniscectomy
- ☐ lateral meniscectomy
- ☐ medial meniscal repair
- ☐ lateral meniscus repair
- ☐ medial meniscal transplant
- ☐ lateral meniscal transplant
- ☐ medial abrade & trephine

   △Lachman (25° flex) manual max ☐ > 2mm
   Anterior endpoint: ☐ firm ☐ soft
   △Total AP Translation (25° flex) ☐ 0 to 2mm ☐ 3 to 5mm ☐ 6 to 10mm ☐ > 10mm
   △Total AP Translation (70° flex) ☐ 0 to 2mm ☐ 3 to 5mm ☐ 6 to 10mm ☐ > 10mm
   △Posterior Drawer Test (70° flex) ☐ 0 to 2mm ☐ 3 to 5mm ☐ 6 to 10mm ☐ > 10mm
   △Med Joint Opening (20° flex/varus rot) ☐ 0 to 2mm ☐ 3 to 5mm ☐ 6 to 10mm ☐ > 10mm
   △Lat Joint Opening (20° flex/varus rot) ☐ 0 to 2mm ☐ 3 to 5mm ☐ 6 to 10mm ☐ > 10mm
   △External Rotation Test (30° flex prone) ☐ < 5° ☐ 5 to 10° ☐ 11 to 19° ☐ > 20°
   △External Rotation Test (90° flex prone) ☐ < 5° ☐ 5 to 10° ☐ 11 to 19° ☐ > 20°
   △Pivot Shift ☐ equal ☐ + glide ☐ ++ (clunk) ☐ +++ (gross)
   △Reverse Pivot Shift ☐ equal ☐ + glide ☐ ++ (clunk) ☐ +++ (gross)
   △Crepitus Ant. Compartment ☐ none ☐ mild ☐ moderate ☐ severe
   △Crepitus Med. Compartment ☐ none ☐ mild ☐ moderate ☐ severe
   △Crepitus Lat. Compartment ☐ none ☐ mild ☐ moderate ☐ severe
5. Harvest Site Pathology ☐ none ☐ mild ☐ moderate ☐ severe
6. X-ray Findings
   Med. Joint Space ☐ none ☐ mild ☐ moderate ☐ severe
   Lat. Joint Space ☐ none ☐ mild ☐ moderate ☐ severe
   Patellofemoral ☐ none ☐ mild ☐ moderate ☐ severe
   Ant. Joint Space (sagittal) ☐ none ☐ mild ☐ moderate ☐ severe
   Post. Joint Space (sagittal) ☐ none ☐ mild ☐ moderate ☐ severe
7. Functional Test
   One Leg Hop (% of opposite side) ☐ ≥ 90% ☐ 90 to 76% ☐ 75 to 50% ☐ < 50%

**Final Evaluation

* Group grade: The lowest grade within a group determines the group grade
** Final evaluation: the worst group grade determines the final evaluation for acute and subacute patients. For chronic patients compare preoperative and postoperative evaluations. In a final evaluation only the first 3 groups are evaluated but all groups must be documented. △ Difference in involved knee compared to normal or what is assumed to be normal.

IKDC COMMITTEE
INSTRUCTIONS FOR THE 2000 IKDC KNEE EXAMINATION FORM

The Knee Examination Form contains items that fall into one of seven measurement domains. However, only the first three of these domains are graded. The seven domains assessed by the Knee Examination Form are:

1. **Effusion**
   An effusion is assessed by ballotting the knee. A fluid wave (less than 25 cc) is graded mild, easily ballotteable fluid – moderate (25-60 cc), and a tense knee secondary to effusion (greater than 60 cc) is rated severe.

2. **Passive Motion Deficit**
   Passive range of motion is measured with a gonimeter and recorded on the form for the index side and opposite or normal side. Record values for zero point/hyperextension/flexion (e.g. 10 degrees of hyperextension, 150 degrees of flexion = 10/0/150; 10 degrees of flexion to 150 degrees of flexion = 0/10/150). Extension is compared to that of the normal knee.

3. **Ligament Examination**
   The Lachman test, total AP translation at 70 degrees, and medial and lateral joint opening may be assessed with manual, instrumented or stress x-ray examination. Only one should be graded, preferably a “measured displacement”. A force of 134 N (30 lbs) and the maximum manual are recorded in instrumented examination of both knees. Only the measured displacement at the standard force of 134 N is used for grading. The numerical values for the side to side difference are rounded off, and the appropriate box is marked.

   The end point is assessed in the Lachman test. The end point affects the grading when the index knee has 3-5 mm more anterior laxity than the normal knee. In this case, a soft end point results in an abnormal grade rather than a nearly normal grade.

   The 70-degree posterior sag is estimated by comparing the profile of the injured knee to the normal knee and palpating the medial femoral tibial stepoff. It may be confirmed by noting that contraction of the quadriceps pulls the tibia anteriorly.

   The external rotation tests are performed with the patient prone and the knee flexed 30° and 70°. Equal external rotational torque is applied to both feet and the degree of external rotation is recorded.

   The pivot shift and reverse pivot shift are performed with the patient supine, with the hip in 10-20 degrees of abduction and the tibia in neutral rotation using either the Losee, Noyes, or Jakob techniques. The greatest subluxation, compared to the normal knee, should be recorded.

4. **Compartment Findings**
   Patellofemoral crepitation is elicited by extension against slight resistance. Medial and lateral compartment crepitation is elicited by extending the knee from a flexed position with a varus stress and then a valgus stress (i.e., McMurray test). Grading is based on intensity and pain.

5. **Harvest Site Pathology**
   Note tenderness, irritation or numbness at the autograft harvest site.

6. **X-ray Findings**
   A bilateral, double leg PA weightbearing roentgenogram at 35-45 degrees of flexion (tunnel view) is used to evaluate narrowing of the medial and lateral joint spaces. The Merchant view at 45 degrees is used to document patellofemoral narrowing. A mild grade indicates minimal changes (i.e., small osteophytes, slight sclerosis or flattening of the femoral condyle) and narrowing of the joint space which is just detectable. A moderate grade may have those changes and joint space narrowing (e.g., a joint space of 2-4 mm side or up to 50% joint space narrowing). Severe changes include a joint space of less than 2 mm or greater than 50% joint space narrowing.

7. **Functional Test**
   The patient is asked to perform a one leg hop for distance on the index and normal side. Three trials for each leg are recorded and averaged. A ratio of the index to normal knee is calculated.
